

## Sample Assessment

<b>Course:</b>	Diploma of Building and Construction
<b>Unit:</b>	CPCCB5004A Supervise and apply quality standards to the selection of building and construction materials

**\*\* Please note:**

*The following is a sample of an assessment and is NOT an actual assessment.*

## What you have to do

New building products and processes are continually coming into the residential building market, usually replacing or supplementing a traditional method of building, with some being more successful than others.

For this assessment you are required to carry out research into a new building product or process and upload your research onto our Building Wiki website.

## Tasks

- 1) Select one (1) product or process that has appeared on the market and gained some acceptance in the past five (5) years or so.
- 2) Your teachers will check the suitability of your topic (if the topic has already been picked by another student or is unsuitable, you may be asked to review and provide an alternative) and provide you with a Wiki website URL.
- 3) Your research report should:
  - a) Discuss the products or processes briefly. You could discuss some of the following depending on relevance:-
    - i) Where used in residential or commercial construction
    - ii) Handling and storage requirements
    - iii) Compatibility

- iv) Preservation and maintenance
  - v) Cost effectiveness
  - vi) How does it meet the requirements of the BCA?
- b) List advantages and disadvantages
- 4) Once you have received the URL for the product or process, load your research report to the new Wiki URL. This is not especially complex. The steps in order are :
- a) This involves copying the research report from your computer to the clipboard (i.e. highlight report text and press Ctrl + C)
  - b) Navigating to the Wiki website using the URL provided by your teachers, and clicking edit
  - c) Pasting the research report into the relevant Wiki web page (i.e. Ctrl + V), saving the web page.
